EUROPEAN COMMISSION – Directorate-General for Agriculture and Rural Development – Unit C.4 (2017): Summary Report. Assessment of the implementation of the evaluation plans of RDPs 2014-2020. Chapter 2 of the AIR submitted in 2017. Brussels.

Disclaimer:

The information and views set out in this report are those of the author(s) and do not necessarily reflect the official opinion of the Commission. The Commission does not guarantee the accuracy of the data included in this report. Neither the Commission nor any person acting on the Commission's behalf may be held responsible for the use which may be made of the information contained therein.

The Evaluation Helpdesk is responsible for the evaluation function within the European Network for Rural Development (ENRD) by providing guidance on the evaluation of RDPs and policies falling under the remit and guidance of DG AGRI's Unit C.4 'Monitoring and evaluation' of the European Commission (EC). In order to improve the evaluation of EU rural development policy the Evaluation Helpdesk supports all evaluation stakeholders, in particular DG AGRI, national authorities, RDP managing authorities and evaluators, through the development and dissemination of appropriate methodologies and tools; the collection and exchange of good practices; capacity building, and communicating with network members on evaluation related topics.

Additional information about the activities of European Evaluation Helpdesk for Rural Development is available on the Internet through the Europa server (<http://enrd.ec.europa.eu>).

1 EXECUTIVE SUMMARY

This section describes the **progress in implementing the Evaluation Plans (EP)** and it is based on the screening of chapter 2 of the annual implementation reports (AIR) submitted in 2017.

Chapter 2 of the AIR shows a high degree of completeness. Overall most of the Member States filled-out chapter 2 of the AIR with its 7 sub-sections. The sub-sections on communication activities was the one filled in most AIRs, followed by the sub-section on evaluation activities.

Modifications of the EPs have tripled compared to the last reporting period. In the context of these modifications RDPs have fine-tuned their evaluation concepts, revised the timing and further complemented the evaluation elements.

The number of reported evaluation activities has doubled compared to the previous reporting period. 374 evaluation activities were reported in 105 of the AIRs submitted in 2017.

- The reported evaluation activities mainly concern the planning and the preparation phase of evaluations. Concerning these two phases, 205 activities were reported in the AIRs submitted in 2017, e.g. the preparation of Terms of Reference and tendering procedures, set-up of administrative arrangements, etc.
- Activities on the structuring phase were reported in 48 cases, e.g. review of evaluation questions and indicators, development of an evaluation approach and methods.

The implementation phase (89 activities) of evaluations and the dissemination phase (32 activities), represent together one third of the total number of reported evaluation activities. This is significantly more than in the AIR submitted in 2016, where only one, out of seven activities, was related to these two phases.

RDPs have considerably progressed in contracting independent evaluators for carrying out evaluation activities. Almost 80% of the AIRs provide information about contracting an evaluator for this programming period, out of which about 75% explicitly stated that they have contracted an *independent* evaluator.

The reported activities on the provision and management of data indicate that RDPs are still setting up and adapting their monitoring systems. Data management-related activities were reported in 109 of the AIRs submitted in 2017, most of them refer to the set-up of the monitoring system (in administrative and technical terms). However, already 13% of the reported activities are related to the actual collection of data.

The **number of completed evaluations has increased significantly** and a high proportion was published online. The evaluations addressed a broad spectrum of topics. The most prominent topics are Priority 4 (ecosystems), cross-priority topics and Priority 2 (competitiveness). The topic LEADER/CLLD was also frequently addressed.

Evaluation-related communication activities have tripled (compared to the AIRs submitted in 2016) and the main communication channels were events (e.g. conference, seminars, workshops, excursions) (98 activities) and the website (52 activities). In total 856,902 stakeholders were reached (mostly through websites).

Follow-up activities in relation to evaluation have doubled and include: (a) improvements of the monitoring system, revision and adaptation of (the definition of) indicators, data collection tools and guidelines to increase the data quality and avoid errors (b) improvement in the management (c) communication, such as improvement of communication instruments, better targeting of activities (d) simplification, e.g. of delivery mechanisms, legal constraints (e) establishment of control groups, exchange of good practice.

2 INTRODUCTION AND CONTEXT

Starting in June 2016, and for every year until 2024, Managing Authorities shall submit to the European Commission an Annual Implementation Report (AIR) on the implementation of their Rural Development Programme.

The reports submitted in June 2017 cover the calendar year 2016. The AIR provides information about the progress concerning the implementation of the RDP and the evaluation plan. The AIRs are drafted and submitted by the Managing Authorities and are subject to admissibility and approval procedures.

The screening of chapter 2 of the AIR submitted in 2017 was carried out by the Evaluation Helpdesk from July 2017 onwards for two purposes: (1) to synthesise the information contained in section 2 a-g, and (2) to draft a synthesis working paper which feeds into the EU level reporting.

The information basis for the screening are the following sub-sections of the AIR submitted in 2017 according to SFC2014 EAFRD AIR technical guidance 'Proposed technical structure and content of Annual Implementation Reports (AIR)':

- 1) Sub-section 2a) Description of any modifications made to the evaluation plan in the RDP during the year, with their justification;
- 2) Sub-section 2b) Description of the evaluation activities undertaken during the year (in relation to section 3 of the evaluation plan);
- 3) Sub-section 2c) Description of activities undertaken in relation to the provision and management of data (in relation to section 4 of the evaluation plan);
- 4) Sub-section 2d) List of completed evaluations, including references to where they have been published online;
- 5) Sub-section 2e) Summary of completed evaluations, focusing on evaluation findings;
- 6) Sub-section 2f) Description of communication activities undertaken in relation to publicising evaluation findings (in relation to section 6 of the evaluation plan);
- 7) Sub-section 2g) Description of the follow-up given to evaluation results (in relation to section 6 of the evaluation plan).

Only the first version submitted through the SFC was analysed. Subsequent improvements of AIRs have not been considered in this analysis. The analysis follows the structure and the content of chapter 2 of the 115 AIRs submitted in 2017.

3 THE PROGRESS IN IMPLEMENTING THE EVALUATION PLANS

3.1 Completeness of the AIRs submitted in 2017 – chapter 2

Most of the AIRs contain relevant content in the various sub-sections of chapter 2. All but two AIRs filled at least one sub-section of chapter 2: In PT-Madeira and PT-Acores no modifications were made and no activities related to evaluation were carried out in 2016. In nine AIRs all sub-sections were filled out. In about half of the AIRs submitted in 2017, 5 or more sections were filled with content, as illustrated in the figure below.

Figure 1. Completeness of the AIRs submitted in 2017 by filled-out sub-sections in chapter 2

Source: Evaluation Helpdesk for Rural Development; 2017

3.2 Description of any modifications made to the evaluation plan in the RDP during the year, with their justification (Sub-section a)

Modifications of the EP were reported in 22 AIRs submitted in 2017 in seven Member States, namely in Estonia, Finland (1 RDP), France (7), Germany (3), Italy (8), Spain (1) and the UK (1). Compared to the last reporting period, this is about three times more. In more than half of the reported cases, only one sub-section of the EP was modified, as illustrated in the figure below. Overall 50 EP-modifications were mentioned in the 22 AIRs submitted in 2017. Most of the modifications are related to sub-section 5 timeline (9 modifications) followed by sub-section 2 governance and coordination (8 modifications). 10 changes were considered as minor changes (e.g. error corrections, technical changes, change of description or names). Estonia is the only RDP, which reported changes across all sub-sections of the EP (including minor technical changes).

Figure 2. Frequency of RDPs by their number of modified sub-sections of the EP

Source: Evaluation Helpdesk for Rural Development; 2017

In relation to sub-section 2 “Governance and coordination” the modifications are mostly related to the creation of new coordination units (e.g. Coordination Committee in ES-National Programme), organisational changes (e.g. separate monitoring and evaluation unit in IT-Sicily), procedural updates (FI-Mainland) or modifications of the evaluation procedure (in Estonia the ongoing evaluation is carried out for Priority 4 and 5).

In France, in the context of the merging of the Basse-Normandie and Haute-Normandie regions, the great region keeps its two RDPs, with a greater and deeper integration. The region decided to create a

common EP, merging the main elements of the two former EPs, in order to evaluate the programmes' impacts on the territory of the new region.

Regarding the modifications of sub-section 3a "Evaluation topics" it was reported that the judgement criteria and indicators were updated (e.g. in FR-Auvergne and FR-Rhône-Alpes), additional studies were included (UK-Wales). In the ES-National Programme, changes in the evaluation themes of the NRN, corresponding to the modification of the RDP were included.

The sub-section 3b "Evaluation activities" was modified in six RDPs. Two German RDPs (Hessen and Niedersachsen-Bremen) report modifications due to the development and finalisation of a detailed evaluation concept in 2016. The Spanish National Programme reported the elimination of some elements as due to the nature of the programme they were not considered as adequate. Others only mentioned minor technical changes.

In relation to sub-section 4 "Data and information" indicators (e.g. their definition) were reviewed and updated.

Regarding sub-section 5 "timeline" the modifications mainly concern the update of the timeline due to the late start of the programme and the contracting of the independent evaluator, to allow a better anticipation of work and a delay between the contract's award and the beginning of the evaluation.

Modifications of sub-section 6 "communication" were reported in two RDPs, in which only minor changes of the descriptions were done.

In relation to sub-section 7 "Resources" mostly additional human resources were added in order to ensure the evaluation-related mission.

3.3 Description of the evaluation activities undertaken during the year (Sub-section b)

Overall, 374 evaluation activities were reported in 105 of the AIRs submitted in 2017. Compared to the activities reported in the AIR submitted in 2016 this is more than double. The evaluation activities are illustrated in the figures below and can be summarised as follows:

- The evaluation activities reported mainly concern the planning and the preparation phase of evaluations. Regarding these two phases, 205 activities were reported in the AIRs submitted in 2017, e.g. the preparation of Terms of Reference and tendering procedures, set-up of administrative arrangements etc.
- 48 activities are related to the structuring phase, e.g. review of evaluation questions and indicators, development of an evaluation approach and methods.
- 89 evaluation-related activities from the conducting phase and 32 activities related to the dissemination phase were reported, which makes about one third of the total number of evaluation activities. This is significantly more as in 2014 and 2015, where one, out of seven activities, was related to these two phases.

Figure 3. Reported evaluation activities by evaluation phase

Source: Evaluation Helpdesk for Rural Development; 2017

The evaluation activities concerned various topics as summarised in the figure below (N.B.: Each evaluation activity was related to up to five different evaluation topics). Some key trends observed are:

- Evaluation topics explicitly addressed include cross-priority topics, RD Priority 4 and RD Priority 5.
- A majority of the reported evaluation activities (169) is not directly related to any evaluation topic. These activities concern for example the selection of evaluators, the set-up of Evaluation Steering Groups, the preparation of ToRs, etc.
- In relation to CLLD/LEADER/LAGs many activities concerned capacity building among LAGs (e.g. in SE and EL) or the preparation of guidelines (e.g. in HR)
- Still 10% of the evaluation activities are related to the ex-post evaluation 2007-2013.

Figure 4. List of evaluation activities by evaluation topic

Source: Evaluation Helpdesk for Rural Development; 2017

Information about contracting evaluators

RDPs have considerably progressed in contracting independent evaluators for carrying out evaluation activities. Almost 80% of the AIRs provided information about contracting an evaluator for this programming period, out of which about 75% explicitly mentioned that they have contracted an independent evaluator.

IT-Puglia and PT-Acores informed that a tendering procedure for the selection of an evaluator was opened only in 2017. No information on the contracting of an evaluator could be found in 24 Annual Implementation Reports submitted in 2017.

3.4 Description of activities undertaken in relation to the provision and management of data (Sub-section c)

Overall, 281 data management related activities were reported in 109 of the AIRs submitted in 2017, most of them related to the set-up of the monitoring system (in administrative and technical terms). Compared to the data management activities reported in the AIRs submitted in 2016 many RDPs are still setting-up the monitoring system. However, the share of RDPs already reporting on the collection of data increased strongly. 13% of the reported activities are related to the collection of data. The type of reported data management activities is included in the table below.

Table 1. Type of data management activities

Type of data management activity	Number	Share	Information provided in the AIRs
Set up of the monitoring system (in administrative and technical terms)	98	35%	Adapting and fine-tuning of the monitoring system and applications; definition of the operations database; Contracting of IT services; national working group / steering group on monitoring and data collection;
Screening data and information sources/ providers	26	9%	Assessment of data needs and availability; Description of main information sources; Identification of supplementary data to be provided; Linking sources, methods and activities
Ensuring data provision	81	29%	Agreements with data providers; Description of how specific data (e.g. farmland bird index) will be calculated; guidelines including definition of process and tasks of actors; training
Collection of data (beneficiaries, non-beneficiaries)	37	13%	Elimination of shortcomings in the data acquisition; Retrieving of data; data collection methods (e.g. survey); development of data collection and management systems; implementation of new dashboards;
Arrangements to fill data gaps	13	5%	Identification of other information sources; monitoring and evaluation working group; incorporation of new indicators; signed agreements
Quality control of collected data	13	5%	Plausibility checks by technical departments; meetings between evaluators and PA; agreement with data provider to collect data on land characteristics of the farms
Management of data protection issues	4	1%	Signed agreements between involved actors;
Other	9	3%	Presentations, methodological development; Guidelines, working group on new processes to improve data collection;
SUM	281	100%	

Source: Evaluation Helpdesk for Rural Development; 2017

Difficulties in relation to data management were frequently mentioned. They refer to various technical monitoring problems, e.g. to improve and allow indicators' calculation, lack of definitions, missing baseline, target values, difficulties in the reliability of calculation of indicators, overall lack of data due to low uptake, etc.

3.5 A list of completed evaluations, including references to where they have been published online (Sub-section d)

The summary of the extracted list of completed evaluations, including references to where they have been published online is available in the Annex.

The number of completed evaluations has increased significantly. This indicates a major progress in the implementation of the EPs although a large proportion of reported evaluations are still ex-post or ex-ante evaluations.

150 completed evaluations (2014 and 2015: 66) were listed in 64 AIRs submitted in 2017, of which about one third (48) are ex-post evaluations of the previous programming period 2007-2013.

Around 17 evaluations refer to the ex-ante evaluation and SEA of the 2014-2020 programming period concerning the process of developing the RDP before its approval.

Besides ex-ante and ex-post (65 in total), the total sum of reported evaluations (150) included 85 evaluations related to the 2014-2020 period.

It is noteworthy that a high proportion of the completed evaluations were published online (120) which makes the documents (in the respective languages) easily accessible to the interested public.

According to the type of publisher, most evaluations were presented by programme bodies. In other more frequent cases, evaluations were published by the evaluators and research institutions.

A classification of the topics to which the evaluation is assigned to is shown in the figure below. It shows that evaluations addressed a broad spectrum of topics. The most prominent topics are Priority 4 (ecosystems), cross-priority topics and Priority 2 (competitiveness). LEADER/CLLD was also more frequently addressed.

Figure 5. Evaluations according to topics

Source: Evaluation Helpdesk for Rural Development; 2017

Only the reported ex-post evaluations have a main focus on impacts, whereas evaluations of the current period focus on topics such as: analysis of situation, context and needs, developing the methodology, management and delivery system, but also on the assessment of first achievements.

3.6 A summary of completed evaluations, focusing on evaluation findings (Sub-section e)

Summaries of evaluation findings were reported in 65 AIRs submitted in 2017. In some cases, Member States report the results of the ex-post evaluation without listing the report in the related sub-section d (List of completed evaluations). About one third of the reported summaries are related to the previous programming period 2007-2013. Some of the provided summaries however do not properly present the findings or contain rather unclear findings. The following part summarizes statements on the current period without considering 2007-2013 ex-post-findings.

The few evaluations related to knowledge transfer and innovation (Priority 1) deal mainly with procedural questions and with the design of the cooperation measure 16.

With respect to farm viability and competitiveness (Priority 2) implementation activities and first achievements are explained. It is too early to estimate the net effects of investment support; however, the impact of investment support may show similar results as presented by ex-post evaluations.

The limited number of evaluations in food chain organisation, processing & marketing, animal welfare, risk management (Priority 3) analyse the outputs of weather insurance schemes. It was stated that there is especially a need for knowledge transfer and advisory services related to farm risks.

There is a comparably high evaluation activity in the field of ecosystems related to agriculture and forestry (Priority 4).

Many of the evaluations are concerned with the set-up of a systematic collection of data (e.g. set-up of biodiversity indicators such as the farmland bird index, collection of data on soil samples).

Only few of the completed evaluations deal with the effectiveness of environmental measures. The findings are not uniform, based on individual cases and thus not representative. Setting up long term monitoring programmes for biodiversity indicators will allow for a more robust assessment of effects. In some cases, the evaluations emphasize limited effects of biodiversity measures due to various reasons, e.g.

- low interest of beneficiaries leading to low coverage by targeted nature conservation operations;
- the farmland bird index (FBI) shows a negative trend. A large proportion of species in decline are birds' representative for the agricultural zones in the region. Their population decline may originate from the current type of agricultural practice. Some species in decline are linked to forest areas;
- A significant number of agricultural holdings in a region (including some large pig and poultry farms) remain outside the agri-environmental measure system, which may reduce the environmental impacts of the programme.

In another region, the high nature value farming indicator (HNV) has a descending trend, which points to the continuous need for promoting measures related to biodiversity.

Another case reports that measures for agricultural environment and climate had direct and indirect positive effects, however, interested farmers require additional consulting to fully exploit the potential of environmental measures.

One evaluation also reports that Areas facing Natural or Other Specific Constraints are weakly targeted and has little leverage on distributional objectives or environmental quality of land management. It may be better to consider other policy options to deliver desired benefits.

There are few evaluations related to resource efficiency, low carbon and climate resilient economy (Priority 5). First positive achievements are also presented. Two evaluations report that the production of renewable energy was increased and biogas is more widely used. In one case, actions supported of forestry have a strong secondary effect on carbon sequestration.

Evaluations in the field of social inclusion, poverty reduction, economic development (Priority 6) partly addressed the late start in the implementation measures. RDPs did not yet show results related to the objectives within Priority 6, e.g. no activities aimed at diversification, creation and development of small business, or job creation, or no operations aimed at improving access to information and communication technologies (ICT) in rural areas. On the other side, a limited number of evaluations could demonstrate a good start of activities on village renewal; landscape preservation, improvement of quality of living.

CLLD/LEADER/LAGs evaluations addressed the starting and learning phase, e.g. calls, applications, selection of LAGs.

Cross-priority topic evaluations addressed mainly the performance and financial absorption of measures across the entire RDP.

The few evaluations on National Rural Networks described how networks renewed, targeted and focused their activities for different target groups e.g. farmers or LAGs in order to slowly increase the impact of the network.

Evaluations related to cross-cutting objectives primarily deal with environment and not with innovation. In a few cases, evaluations refer to the low implementation level of environment-related measures.

A few evaluations reflected specific regional or territorial needs in terms of animal welfare or areas with natural constraints.

The few evaluations related to governance and delivery mechanism expressed challenges in the duration of payments, in the development status of the database for reporting and evaluation, technical and organisational problems related to the IT system, low adequacy of some monitoring indicators, lack of applications, missing coordination between the administrative stakeholders involved in programme's implementation, and the need to improve the RDP's communication instruments.

3.7 A description of communication activities undertaken in relation to publicising evaluation findings (Sub-section f)

Overall, 280 evaluation-related communication activities (three times more than in the AIRs submitted in 2016) were reported in the AIRs submitted in 2017, of which the main communication channels were the multi-events (e.g. conference, seminars, workshops, excursions) (98 activities) and the website (52).

Communication activities undertaken in relation to publicising evaluation findings mostly refer to the publication of the ex-ante evaluation reports. In total, 856,902 stakeholders (most of them on websites) were accounted for, mainly related to website visitors and participants in meetings, workshops, etc. The number of reached stakeholders through online channels is reported to be difficult to monitor and therefore evidently underestimated.

Figure 6. Communication activities by type and number of stakeholders reached

Source: Evaluation Helpdesk for Rural Development; 2017

Communication activities during the ex-ante evaluation were included. Regarding the addressed evaluation topics, most of the communication activities refer to cross-priority topics, but also to CLLD/LEADER. However, many are not directly related to an evaluation topic (e.g. presentation of the Monitoring Committee (MC), status meetings, conferences and capacity building events).

Most of the communication activities are organised by the Managing Authority and the ministry or one of its departments and the main target groups envisaged are the public and professional public, the programme authorities and administration, the ministries and its departments themselves, evaluators and other economic and social stakeholders and partners.

3.8 Description of the follow-up given to evaluation results (Sub-section g)

Overall, 169 follow-up activities were reported in 50 RDPs, which means that the number of activities has doubled compared to the AIRs submitted in 2016. 47% of the follow-up activities are related to the previous programming period 2007-2013.

Follow-up activities include: (a) improvements of the monitoring system, revision and adaptation of (the definition of) indicators, data collection tools and guidelines to increase the data quality and avoid errors (b) improvement in the management (c) communication, such as improvement of communication instruments, better targeting of activities (d) simplification, e.g. of delivery mechanisms, legal constraints (e) establishment of control groups, exchange of good practice.

4 OVERALL ASSESSMENT

4.1 Summary assessment on chapter 2 of the AIR

Based on the information reported in the AIRs submitted in 2017, it can be concluded that many Member States show a **good progress in the evaluation** of the RDP when looking at the increased number of evaluation activities, and the number of completed evaluations.

While the **main progress reported in 2016 concerns activities in relation to the planning and preparation** of evaluations, the conduction and dissemination phase of evaluation is also increasingly concerned. However, many RDPs are still at an early stage of programme implementation, which is also reflected in the reporting.

The analysis reveals that regarding data management many **Member States are still adapting and updating the data management system**, which is partly motivated with the late programme start.

A large number of reported activities are furthermore related to the **governance of evaluation** (selection of evaluators, preparation of ToRs for evaluations, etc.). Evidence suggests that most RDPs use external evaluation contracts to carry out the RDP-related evaluation activities or parts of it.

While the number of **completed evaluations** has significantly increased a large proportion of reported evaluations are still ex-post or ex-ante evaluations or SEA.

Problems and issues identified concern the delay of the programme implementation. Some Member States explain that therefore no evaluation activities were carried out in 2016. Another problem observed is related to the proper set-up and operationalisation of the monitoring system and related issues on data collection and data quality.

4.2 Specific areas to be observed

Areas to be specifically observed in the next reporting period are:

- The follow-up of evaluations and the incorporation of recommendations on the AIR in 2017.
- The development and functioning of the data-management system and its fitness for evaluation.
- The timing of evaluations (e.g. the early start of contracting procedures) with a view to ensure high quality evaluations.

4.3 Recommendations on better reporting

Overall the **quality of reporting on chapter 2 of the AIR can be considered as satisfactory**. Confusions exist in particular about how to handle evaluations related to the previous programming period, to what extent evaluation findings have to be reported in chapter 2.

With a view to further improve the reporting the following recommendations are given:

- RDPs should present clear summaries of completed evaluations, focusing on evaluation findings in sub-section 2e).
- Achieve a common understanding of how stakeholders reached through online channels are expected to be quantified in subsection 2f).
